35.2 - The Nervous System . Regents Biology! Objectives! Describe the components of a neuron and their functions. ! Describe how an action potential is generated and propagated. ! Describe how an impulse is transmitted across synapses. Regents Biology! Why do animals need a nervous system?!

35.2 - The Nervous System

A nervous system that functions correctly is a fantastically complex, well-oiled machine—synapses fire appropriately, muscles move when needed, memories are formed and stored, and emotions are well regulated. Unfortunately, each year millions of people in the United States deal with some sort of nervous system disorder. 35.E: The Nervous ...

35-2 The Nervous System Section 35-2

Figure 35.26 In the autonomic nervous system, a preganglionic neuron of the CNS synapses with a postganglionic neuron of the PNS. The postganglionic neuron, in turn, acts on a target organ. Autonomic responses are mediated by the sympathetic and the parasympathetic systems, which are antagonistic to one another.

35.4 The Peripheral Nervous System - Biology 2e | OpenStax

In biology, the nervous system is a highly complex part of an animal that coordinates its actions and sensory information by transmitting signals to and from different parts of its body. The nervous system detects environmental changes that impact the body, then works in tandem with the endocrine system to respond to such events. Nervous tissue first arose in wormlike organisms about 550 to ...

Nervous system - Wikipedia

The somatic nervous system The somatic nervous system is also a part of the peripheral nervous system. One of its roles is to relay information from the eyes, ears, skin and muscle to the central nervous system (brain and spinal cord). It also obeys commands from the central nervous system and makes muscles contract or relax, allowing us to move.
