Addictive Thinking Understanding The Process

They conceptualize relapse as a “transitional process, a series of events that unfold over time” (Marlatt & Gordon, 1985). The model identifies factors that can contribute toward episodes of relapse. These include intrapersonal factors such as self-efficacy (the degree to which an individual feels confident and capable of performing a certain behavior in a specific situational context ...

Addictive Behaviors and ADHD in Adults Explained

Rather, the new thinking reflects the belief that addiction is functional: it serves while it destroys. Addiction is a relationship between a person and an object or activity. With addiction, the object or activity becomes increasingly more important while previously important activities become less important. Ultimately, addiction is about the complex struggle between acting on impulse and ...
