Irrigation in India includes a network of major and minor canals from Indian rivers, groundwater well based systems, tanks, and other rainwater harvesting projects for agricultural activities. Of these groundwater system is the largest. In 2013-14, only about 36.7% of total agricultural land in India was reliably irrigated, and remaining 2/3rd cultivated land in India is dependent on monsoons.

Irrigation in India - Wikipedia

Extreme weather events are not new to the country; however, the increasing frequency of these events are. All thanks to climate change, which has been altering weather patterns across India. The latest example is the torrential rains in Uttarakhand earlier this week. The weather remains calm over Uttarakhand post the retreat of the monsoon season.
