Examination of Orthopedic patients

Tripod Sign. The tripod sign is a provocative test that is conducted while the patient is in the seated position. By elevating one of the legs, a positive sign will elicit pain in the back (again often radiating down the leg) and should be accompanied by the patient's natural tendency to decrease the pain by leaning back and resting both arms on the table to support him or herself, thus the ...

History. Introduction. Assessment of backache and/or sciatica is never easy. Despite the increasing accessibility of highly sophisticated technical . aids, diagnosis of lumbar problems still relies on the principles of history and clinical examination. Taking the history is by far the most significant tool in the diagnostic procedure.
