Linux began in 1991 as a personal project by Finnish student Linus Torvalds: to create a new free operating system kernel. The resulting Linux kernel has been marked by constant growth throughout its history. Since the initial release of its source code in 1991, it has grown from a small number of C files under a license prohibiting commercial distribution to the 4.15 version in 2018 with more ...

Rewriting the Linux kernel in rust would be a rehash of why we ended up with Linux in the first place: rewriting an older OS from scratch. I would love to see a solid implementation of a real micro kernel based OS based on a message passing core in Rust to become a viable alternative to the now 50 year old Unix architecture. This would give us a possibility of some real progress on the ...
