Although facilities range from small lots with a few head to modern facilities with more than 50,000 head, there are economies of scale in cattle feeding. The cost of feeding per animal drops as the number of animals in the operation increases. Because of the high risks and the economies of scale that favor larger operations, beef feeding enterprises are not as well adapted to small-scale and ...

Feeding Beef Cattle - Penn State Extension

Growing global demand for meat and dairy products has contributed to the doubling of soybean production in the last 20 years. Soy is primarily used to feed pork, poultry, and dairy cows, though significant amounts are also used to produce vegetable oil and biodiesel. Large soybean fields in the tropics,
