The Parallel Postulate states that there exists one line through C which is parallel to line AB. As you know, an infinite number of lines can be drawn through point C, but only one of them will be parallel to line AB. The parallel postulate is very important in doing geometric proofs. It is basically a way to formally say that when given one line, you can always draw another

In Coordinate Geometry, two lines are parallel if their slopes ( $m$ ) are equal. For example: The line is parallel to the line. Their slopes are both the same. In the Coordinate Plane, two lines are perpendicular if the product of their slopes ( $m$ ) is  $-1$ .

The symbol for  
“parallel to” is “// “.  
Parallel lines are the  
lines which never meet  
each other. For the two  
lines to be parallel, the  
most important thing is  
that they are drawn in  
the same plane. These  
lines are always  
equidistant from each  
other. What is a
