SLM, MFO/BBC Ae 8/14 for Switzerland SBB, 10,255 horsepower. For a time after it debuted at the Swiss Exhibition, the Ae 8/14 was the most powerful locomotive in the world.

The 9 Most Powerful Locomotives in the World - The Drive

The answer came in the form of one of the most significant inventions of the Industrial Revolution, the steam engine, which was critical to the development of the modern railroad and trains. In 1803, a man named Samuel Homfray decided to fund the development of a steam-powered vehicle to replace the horse-drawn carts on the tramways.

The History of Railroads: From Trackways to Hyperloop Trains

After many tests at the Electric Railway Test Commission in St. Louis they came up with an aerodynamic design powered by a 100 horsepower, gasoline engine manufactured by early pioneer, Riotte. The first unit, listed as #M-1 and given the name "Windsplitter," was completed at UP's shops in Omaha, Nebraska during March of 1905.

The Class K-15 locomotives had 64 inch drivers and were used in freight service all around the railroad. These locomotives were know as a "Copper Head" on the ACL. Courtesy of the Chester Holley Photo Collection.

500+ Best old train photos images | old train, train, railroad

A locomotive or engine is a rail transport vehicle that provides the motive power for a train.If a locomotive is capable of carrying a payload, it is usually rather referred to as a multiple unit, motor coach, railcar or power car; the use of these self-propelled vehicles is increasingly common for passenger trains, but rare for freight (see CargoSprinter and Iron Highway).

Locomotive - Wikipedia

Long trains usually need more than one locomotive. A "locomotive consist" is a number of locomotives coupled together, all controlled from a single cab by a small crew. In railroad parlance, individual locomotive are called units, and operating several units in tandem with one set of controls is called MU (for "multiple unit") operation.

When multiple locomotives pull a train, why are they often ...

A diesel locomotive is a type of railway locomotive in which the prime mover is a diesel engine.Several types of diesel locomotives have been developed, differing mainly in the means by which mechanical power is conveyed to the driving wheels.. Early internal combustion locomotives and railcars used kerosene and gasoline as their fuel. Rudolf Diesel patented his first compression-ignition ...
