2 Overview¶. 2.1 Modeling Concepts¶. An OMNeT++ model consists of modules that communicate with message passing. The active modules are termed simple modules; they are written in C++, using the simulation class library. Simple modules can be grouped into compound modules and so forth; the number of hierarchy levels is unlimited. The whole model, called network in OMNeT++, is itself a compound ...

The term military simulation can cover a wide spectrum of activities, ranging from full-scale field-exercises, to abstract computerized models that can proceed with little or no human involvement—such as the Rand Strategy Assessment Center (RSAC).. As a general scientific principle, the most reliable data comes from actual observation and the most reliable theories depend on it.
